Solving Differential Equations representing Simple Harmonic Motion

Amritpal Singh

July 18, 2015

Consider m is the mass of object, k is spring constant, x is a displacement from equilibrium state of a spring and t is time.
Therefore, the given differential equation of Simple Harmonic Motion is

$$\frac{\mathrm{d}^2}{\mathrm{d}t^2}x + \frac{kx}{m} = 0.$$

Solving the above differential equation, we get,

$$K_2 \cos\left(\frac{\sqrt{k}t}{\sqrt{m}}\right) + K_1 \sin\left(\frac{\sqrt{k}t}{\sqrt{m}}\right)$$

When $m = 1$, $k = 1$, $a = 1$ and $b = 1$ then the graph is
